DEQ - ULTRA Rig Permit Hearing

From: CURED

Since we are already in non-attainment, we would ask that your rig emissions proposals for NO_x and VOC's for 2010 and 2011 at least stay the same as 2009, or better yet, show an overall decrease of these emissions. The application analysis shows a proposed NO_x for 2009 at 516.4, and VOC at 29.4. The 2010 proposal indicates NO_x at 553.7 and VOC at 41.8. This is a large increase. The 2011 proposal indicated NO_x at 497.0 (a slight decrease from 2010), and VOC at 37.9, still well above the 2009 emissions.

We do not agree with allowing an increase in these ozone precursors over the next two years before we experience a decrease in 2012.

Thank you,

Elaine Crumpley
Chair – CURED
